

Hackathon Day 02 Planning The Technical Foundation

Title:

Market Place Technical Foundation- [E-Commerce Website]

1. Frontend (Next.js) – User Experience at the Core

- **Goal:** Provide a seamless and intuitive experience for the customer.
 - **User-Friendly Navigation:** Home page with easy-to-browse categories, featured products, and promotional offers.
 - **Product Discovery:** Users can quickly search, filter, and sort products based on their preferences (e.g., price, rating, category).
 - **Responsive Design:** The website adapts flawlessly across devices (desktop, tablet, mobile), ensuring customers enjoy a consistent experience anywhere.

2. Backend (Sanity CMS) – Data at Your Fingertips

- **Goal:** Centralized, structured data management that supports dynamic interactions.
 - **Product and Rental Data Management:** All product listings, rental durations, pricing, and availability are centrally stored and easy to manage.
 - **Real-Time Data Delivery:** Every change in the backend (e.g., product availability, price updates) is reflected instantly across the frontend, maintaining consistency.
 - **Customer Information Storage:** Securely stores customer profiles, past rental history, and preferences, ensuring a personalized shopping experience.

3. Third-Party APIs – Powerful Integrations for a Smooth Journey

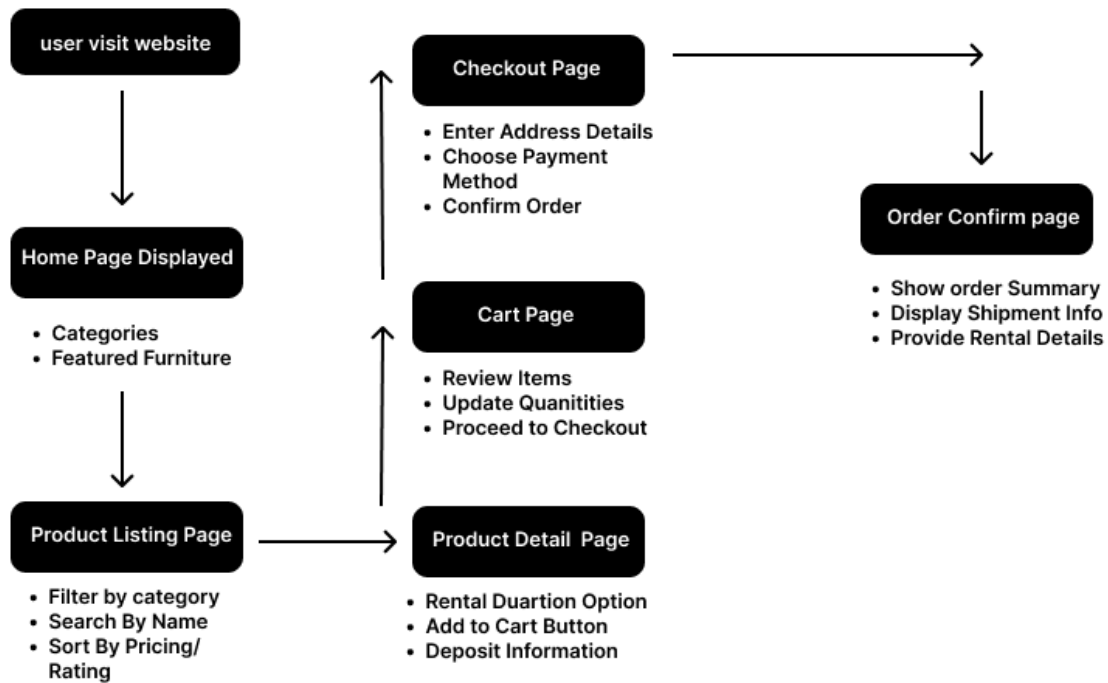

- **Goal:** Enhance functionality with trusted external services that handle critical aspects of the marketplace.

- **Payment Gateway:** Secure and seamless payment processing with multiple options (credit/debit card, online wallets). The API ensures compliance with the highest security standards, protecting both the customer and the business.
 - **Shipment Tracking:** Provides customers with real-time delivery status updates, giving them confidence and peace of mind. Integration with third-party logistics services ensures that every piece of furniture arrives on time and in perfect condition.
 - **Automated Communication:** When users place orders, payment, and shipment details are automatically communicated via notifications, keeping customers informed every step of the way.
-

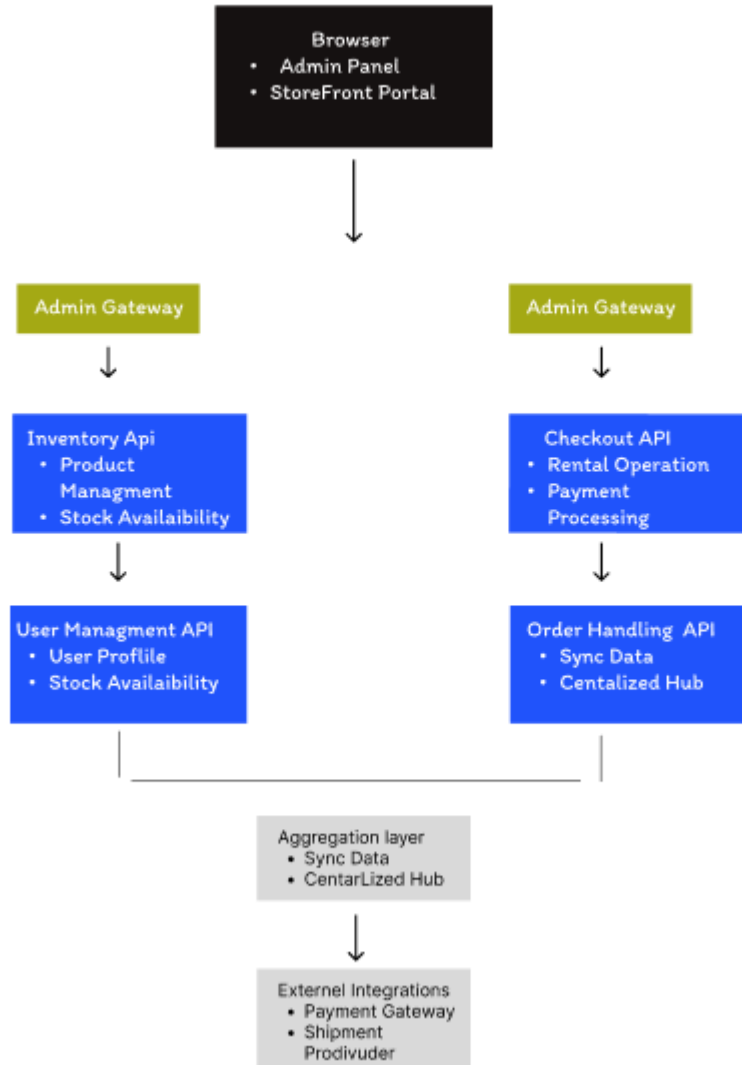

End-to-End Workflow:

- **From Browsing to Checkout:** The user experiences a highly intuitive journey from discovering furniture, adding items to their cart, and proceeding to a smooth, secure checkout process.
- **Backend Efficiency:** Every product detail, rental duration, and pricing update is automatically synced and displayed on the frontend in real time, ensuring consistency and speed.
- **Seamless Payments and Tracking:** Payment and shipment processes are seamlessly integrated, with real-time updates, ensuring transparency and customer trust.

Front End Requirements

System Architecture

Endpoint	Method	Description	Request Body	Response Example
/products	GET	Fetch product listings.	N/A	{ "id": 1, "name": "Sofa", "price": 100 }
/rental-duration	POST	Add rental details.	{ "productId": 456, "duration": "7 days", "deposit": 500 }	{ "confirmationId": 789, "status": "Success" }
/shipment	GET	Track delivery status.	N/A	{ "orderId": 123, "status": "In Transit" }

End Point Api
